PROFESSIONAL SUMMARY

Frontend Engineer with 4+ years of experience building web applications for the financial and healthcare sectors. Specialised in React, Next.js and TypeScript: designed and implemented a microfrontend architecture with Module Federation for Banco de Venezuela's home banking — a white-label platform designed for 10+ million users — and technically led its web development. Full stack skills (Node.js, REST APIs, SQL) to diagnose and solve problems end to end — from the frontend to the APIs and the database — plus two products of my own built from scratch: Citavek, a booking SaaS in production, and KYZZ, an e-commerce store with its own operations panel.

TECHNICAL SKILLS

Frontend: React, Next.js (App Router, Server Components, Server Actions), TypeScript, JavaScript (ES6+), Microfrontends, Module Federation, Atomic Design, Material UI, Tailwind CSS, Zustand, HTML5, CSS3, Responsive and mobile-first design, Web performance

Backend & data: Node.js (NestJS, Express), REST APIs, SQL, PostgreSQL, Oracle, Prisma, Laravel/PHP, SOAP, Webhooks

Architecture & practices: Clean / Hexagonal Architecture, Vertical Slice, Multi-tenancy, SOLID, Design patterns, Clean Code

Infrastructure & tooling: Docker, Kubernetes, AWS (EC2, S3), Vercel, cPanel, Git/GitHub, Sentry, CI/CD, Agile/Scrum

Other: React Native, MongoDB, Figma, Cloudinary, Wompi, AI-assisted development

PROFESSIONAL EXPERIENCE

Development Analyst · Web Development Technical Lead

Smart Financial — Banking software · Remote

Oct 2023 – Jun 2026

White-label home banking. Client: Banco de Venezuela, the country's largest bank; platform designed to support 10+ million users.

- Technically led and built the web side of 4 home banking products for Banco de Venezuela — Personal and Business, on web and app — over more than a year, coordinating with backend, QA and product under Agile/Scrum.
- Researched architectural alternatives, then designed and implemented a microfrontend architecture with Next.js and Module Federation — a host that owns session and navigation, and remote modules that deploy independently — applying Vertical Slice to separate domains.
- Implemented banking-grade security on the web layer: JWT tokens signed (JWS) and encrypted (JWE), encrypted payloads, HttpOnly/Secure/SameSite cookies, MFA/OTP, CSP, CSRF protection and a strict session that ends on page reload or inactivity.
- Segmented the platform by domain: premium users come in through a domain with its own deployment for a smoother experience. The platform was built white-label so it could be sold to other banks.
- Built a reusable component system with Atomic Design and Material UI (v5), standardising the interface and user experience across modules and microfrontends.
- Optimised frontend performance — large lists, unnecessary re-renders, data loading and resource usage — improving the overall stability of the application.
- Integrated Sentry for incident monitoring and acted as the technical reference for end-to-end troubleshooting: frontend → REST APIs (Node.js) → Java backend services → Oracle, with SQL queries to validate data.
- Deployed to test and staging environments with Docker and Kubernetes, verifying functionality and performance before each release.

Development Analyst (Full Stack)

Promedico — Employee fund for doctors · Cali, Colombia

Jul 2022 – Oct 2023

Employee fund exclusively for doctors in Colombia: savings, loans, insurance cover and well-being services for its members.

- Delivered new features and requirements on the web applications for loans and financial services (React JS, Laravel 8 / PHP) used in the fund's daily operations.
- Built and maintained the cross-platform mobile app with React Native, published and live on the App Store and Google Play, and deployed on AWS the REST APIs that power it.
- Integrated SAP through SOAP web services to manage member data, and DataCrédito for credit analysis and risk validation.
- Deployed to production on internal servers, cPanel (React JS and Laravel) and AWS, and published the mobile apps to the Apple and Android stores.
- Supported internal and external applications — bug fixes, improvements and ongoing maintenance — and documented developments and processes in detail.

OWN PROJECTS

Citavek — Multi-tenant booking SaaS for barbershops (in production)

Own product · citavek.com · github.com/nivek9922/citavek-app

- Defined the product and its architecture (Clean / Hexagonal) and built it end to end with Next.js 16 (App Router), Node.js and PostgreSQL: authentication, data modelling, APIs and deployment.
- Four-step public booking flow (service → barber → date → confirmation) and a public page per business, customisable from its panel.
- Role-based management panel for businesses, services, barbers, customers, availability and scheduling, plus a control tower with platform telemetry: active businesses, appointments, feature adoption and onboarding.
- I use AI assistants as a support tool; I implement and review the code myself before merging it.

KYZZ — Fashion e-commerce with an operations panel (launching soon)

Own project · kyzz-shop.vercel.app

- Complete store with Next.js 16, React 19, TypeScript, Prisma and PostgreSQL: catalogue with variants and inventory, cart, wishlist, checkout and order tracking.
- Integrated the Wompi payment gateway with webhooks to confirm and reconcile payments automatically, plus cash on delivery and orders via WhatsApp and Instagram.
- Operations panel for revenue by channel, orders, products, coupons, returns and customers; images on Cloudinary, and Server Components, Server Actions and Cache Components for performance.

Bilingual personal portfolio

Own project · github.com/nivek9922/kevin-portafolio

- Next.js 16 and strict TypeScript, statically generated in Spanish and English, with a Tailwind CSS v4 design system, accessibility verified with axe and complete SEO (metadata, hreflang, sitemap, Open Graph).

EDUCATION

Computer Engineering · Universidad Autónoma de Occidente, Cali

Graduated: Mar 2025

CERTIFICATIONS

Platzi: Advanced Next.js (Jan 2026) · Advanced React (Feb 2026) · Backend with NestJS (Mar 2026) · Backend with Express.js (Mar 2026)

LANGUAGES

Spanish: Native English: Basic (A2) — reading technical documentation; continuously improving.
